This problem concerns a decrease in employee performance, an increase in employee turnover and low satisfaction. This research aims to determine the state of job insecurity, job satisfaction and employee performance and to find out the magnitude of the influence of job insecurity and job satisfaction on employee performance in the injection production division of PT. Meprofarm Pharmaceutical Industries, both partially and simultaneously. The method used in this research is descriptive and verification method with a quantitative approach. The population used in this study were all employees at the injection production division of PT. Meprofarm Pharmaceutical Industries, totaling 43 respondents. Sampling in this study used a nonprobability sampling technique, the sample was saturated. Based on the distribution of data obtained that job insecurity, job satisfaction and performance are included in the medium category. Based on the results of the determination test, it was found that job insecurity had an effect of 25.4% on performance, job satisfaction had an effect of 27.7% on performance, job insecurity and job satisfaction had an effect of 53.1% on performance. The results of the study partially show that job insecurity has a significant effect on performance, partially job satisfaction has a significant effect on performance. Simultaneously job insecurity and job satisfaction have a significant effect on performance.
